

Get the Most out of Prescribed
ADHD Medications with

FOCUS

ADHD has received increased attention in recent years. Improved tools for diagnosis and a better understanding of the condition itself have led to an increase in prescribed medications. This proliferation of prescriptions made ADHD the ideal target for DesBio's new **RxS** (Homeopathic Prescription Support) line.

A New Understanding

Extensive research has taken us far beyond the traditional "hyperactive/inattentive" view of ADHD as a clinical diagnosis:

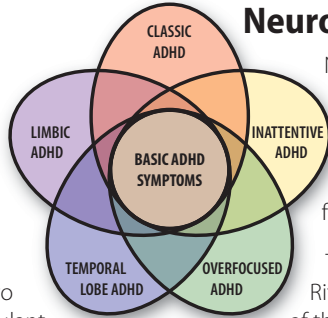

Classic ADHD includes the standard symptoms of hyperactivity and impulsivity and responds most readily to a stimulant.

Inattentive ADHD symptoms include difficulty focusing, listening, or paying attention and inability to complete tasks. This subtype also responds to a stimulant.

Overfocused ADHD is characterized by negative thoughts and behaviors, stubbornness, compulsivity and an argumentative nature, and responds to a combined regimen of antidepressants and stimulants.

Temporal Lobe ADHD is distinguished by irritability, aggressiveness, anxiety or worry, and memory or learning problems. Antiepileptic medications are typically prescribed to treat this type of ADHD.

Limbic ADHD is characterized by depression and a lack of motivation or energy. Stimulant anti-depressants have been successful in reducing these symptoms.

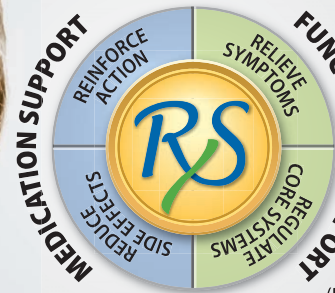

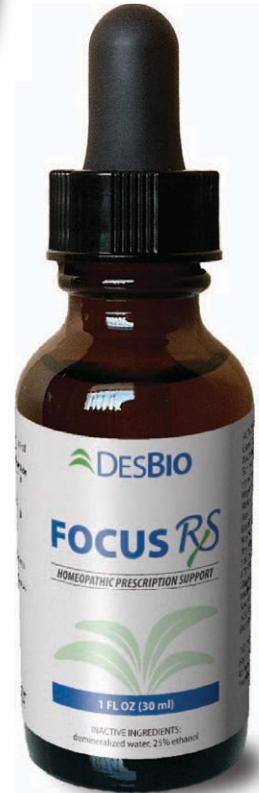

Neurotransmitters and ADHD

Neurotransmitters are chemicals that carry signals across the synapses of the nervous system. Reduction or inhibition of neurotransmitters reduces the brain's ability to focus and function at peak efficiency.

Traditional ADHD medications such as Ritalin and Adderall increase production of the neurotransmitters dopamine and norepinephrine, thus increasing focus and attention. FOCUS RxS includes ingredients to reinforce this function. The FOCUS RxS formula includes ingredients to reduce the common side effects of these medications (like addiction, skin problems, digestive issues, irritability, and headache.)

FOCUS RxS includes additional ingredients to promote attention and concentration and increase calmness to relieve the common symptoms of ADHD.

Other FOCUS RxS ingredients support and regulate the body's systems, including the brain and central nervous system.

The RxS Philosophy

At DesBio we are committed to innovation and to incorporating the latest advances in medicine and technology into our formulas. An increasing interest in integrated medicine that combines the advantages of both allopathic and homeopathic treatment led us to the development of our new RxS (Prescription Support) line of products.

These formulas are carefully crafted to complement existing prescription medications for specific issues. Ingredients are chosen to reinforce the primary action of these medications and to reduce their side effects. Additional ingredients provide relief from the underlying symptoms and help regulate body systems for optimal health.

PRESCRIPTION  SUPPORT

NOTE: RxS products do **not** replace a prescription. You should **not** stop taking or reduce the dose of a prescription without consulting the prescribing clinician. If you are not currently taking a prescription and take an RxS product **you may still need a prescription in the future.**

FOCUS *RxS* INGREDIENT LIST

Prescription ADHD medications stimulate production of the neurotransmitters dopamine and/or norepinephrine. FOCUS RxS includes ingredients to:

Upregulate Production of Dopamine and Norepinephrine

- Dopamine
- Norepinephrine
- PEA
- Tyramine

The symptoms of ADHD are well known—inability to concentrate or pay attention, hyperactivity... FOCUS RxS includes ingredients chosen to:

Promote Attention

- Dulcamara
- Phosphorus
- Sabina
- Silicea
- Hyosycamus Niger

Calm and Soothe

- Aresenicum Album
- Belladonna
- Nux Vomica
- Veratrum Album

The FOCUS RxS formula includes ingredients chosen to reduce these common side effects of prescription ADHD medications:

Addiction

- Nux Vomica eases withdrawal

Skin Problems

- Silica builds collagen

Digestive Problems

- Tarentula relieves constipation
- Belladonna relieves constipation and improves digestion

Irritability and Restlessness

- Phosphorus relieves nervous exhaustion
- Sabina relieves anxiety
- Silica improves weakness and restlessness
- Valerian calms and soothes
- Belladonna acts as a sedative

Headache

- Belladonna relieves headache

In addition to reinforcing the action of ADHD pharmaceuticals, FOCUS RxS includes ingredients to regulate the body's core systems:

Up-Regulate Brain Function

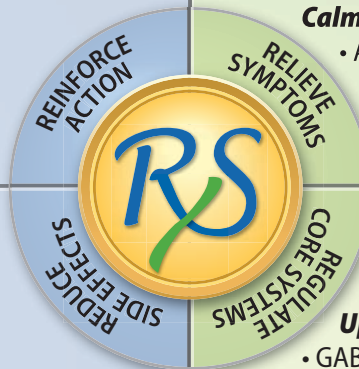

- GABA
- Acetylcholine Chloride
- Serotonin
- Taurine
- Adrenalinum
- Octopamine

Normalize Brain Function

- Cerebrum Suis
- Pineal Gland Suis
- Thalamus Opticus Suis
- Brain Stem Suis
- Diencephalon Suis
- Brain Suis

Up-Regulate Aerobic Metabolism

- Sarcolacticum Acidum
- Malicum Acidum
- Formicum Acidum
- a-Ketoglutaricum Acidum
- ATP
- Adenosinum Cyclophosphoricum
- Dysentery Co

The Four 'R's of *RxS*

Each product in DesBio's new RxS line is carefully formulated. Ingredients are chosen for their ability to provide one or more of four basic functions in two major categories:

MEDICATION SUPPORT		FUNCTIONAL SUPPORT	
<p>Reinforce Action</p> <p>Prescription and over-the-counter pharmaceuticals are designed with specific effects in mind. These effects might include reduction of symptoms associated with a condition or more basic functionality designed to address the condition itself. In either case, DesBio's RxS products support the primary functions of the medication.</p>	<p>Reduce Side Effects</p> <p>Even the most effective pharmaceutical may cause effects other than those intended by the manufacturer. Some of these side effects are undesirable. RxS products contain ingredients chosen to reduce or minimize these negative effects.</p>	<p>Relieve Symptoms</p> <p>Many conditions that are traditionally treated with pharmaceutical medications carry symptoms that are not directly addressed by the drug. DesBio's RxS products contain ingredients that have been used for years in traditional homeopathic remedies to relieve these symptoms.</p>	<p>Regulate Body Systems</p> <p>At its most basic, nearly any medical condition that requires medication is in some way a reflection of irregularity in the body's functional systems. Every RxS product contains ingredients chosen to support and regulate pertinent body systems to promote normal function.</p>
