

Provides temporary relief of symptoms of vaccination side effects.

What is VACC:HC?

VACC:HC is a comprehensive combination of homeopathic ingredients to temporarily relieve symptoms of vaccinosis, such as fear of vaccinations and general vaccine reactions.

Why VACC:HC?

- In light of the varying attitudes towards vaccines, both the holistic and conventional medical communities acknowledge that adverse effects from vaccines do occur.
- “Vaccinosis is the term applied to the state of energetic imbalance occurring after an animal or person receives an administration of an immune system stimulating substance (i.e., a vaccination).”¹
- The term “vaccinosis” has arisen from the holistic medical community, where the practice of vaccination and management of related sequela have been an ongoing area of interest.
- Commonly vaccinations can cause pain and redness at the injection site plus a low-grade fever. These reactions are considered mild and are expected to go away within a few days. Other side effects may be severe and long lasting.²

Homeopathic Indications

For the temporary relief of aftereffects of general vaccinations such as sore muscles, headache, and tiredness.
