ABOUT THIS EVENT

Are your patients coming to you with symptoms that seem **unexplainable**? Mysterious, idiopathic illnesses are running rampant, and uncovering the source can feel like a hopeless game of 21 questions. In this seminar, we will look at some of the sneakiest culprits behind your patients' health issues; including Lyme disease, the relationship between viruses and chronic fatigue, hidden dangers within our food supply, and how emotional trauma can have an unexpected influence on physical health.

Here is an opportunity to learn from experienced clinicians about some of the more challenging and less-understood health concerns emerging in your clinical practice. **Speakers will discuss diagnostic strategies, clinical pearls, case studies, and break-through support protocols.**

TOPICS INCLUDE

- Managing the Hashimoto's Patient with Epstein-Barr Virus (*Gil Kajiki, CFMP, DC*)
- ACE in the Hand: Addressing the Impact of Your Patients' Past and Childhood Trauma on Their Physical Health (*Michelle Perro, MD, DHom*)
- Series Symptom Relief: Focus on Lyme (*Lisa Holt, DACM, L.Ac.*)
- Why Are Our Children So Sick? (*Michelle Perro, MD, DHom*)
